

## Greenergy expands Ontario fuel supply infrastructure

**Greenergy announces its investment in another new rail-to-road fuel supply terminal, to be located in Johnstown, eastern Ontario.**

The new deal will allow Greenergy to further expand its fuel supply business in Canada by offering competitive pricing and high levels of supply reliability to customers in an area of growing demand, according to a press release.

The new terminal features a new fully-automated truck loading system allowing road vehicles to load fuel products directly from rail tank cars through conventional terminal truck loading racks.

“By investing in new supply facilities close to the end-customer, we are changing the way that fuel is supplied to the market. Our facilities create additional capacity where it is needed, providing safe and efficient fuel supply to customers,” said Mike Healey, Greenergy Fuels Canada’s Chief Executive Officer.

The new Johnstown terminal will be securely located within the Canadian Rail Equipment Works and Services Inc (“CREWS”) Johnstown rail yard and will be operated by CREWS with 24/7 truck-loading capability.
