

## Chargepoint and Total Gas partner to deliver EV charging solutions across UK

**This agreement comes after European countries committed to banning the sale of petrol and diesel vehicles in the coming decades.**

ChargePoint and Total Gas & Power recently announced a reseller partnership that will deliver EV charging solutions and services to businesses throughout the United Kingdom.

This agreement comes after several European countries, including the UK, committed to banning the sale of petrol and diesel vehicles in the coming decades, creating an increase in demand for broadly distributed EV charging solutions. Analyst reports indicate that one in four new cars sold worldwide will be electric by 2030, and more than half by 2040, underscoring the critical need for a massive investment in EV charging infrastructure.

“The transportation landscape is evolving at a rapid pace and partnerships like this are essential to provide immediate, widely accessible charging solutions to support the ever-growing number of EV

drivers on the road”, ChargePoint vice president for Strategic Accounts, said Mark Kerstens.

ChargePoint currently has more than 55,000 places to charge on its network worldwide and, last month, committed to expanding its global network to 2.5 million by 2025.

Through this partnership, ChargePoint and Total Gas & Power aim to increase access to EV charging solutions of all kinds as a means to serve the growing population of EV drivers and accelerate the adoption of e-mobility in the UK.
