

CAPPO - Czech Association of Petroleum Industry and Trade

ČAPPO brings together companies operating in the petroleum industry in the Czech Republic. It pursues no political or ideological goals but the ethical and fair market behavior. It is not a business entity.

In the pursuit of our interests, we have never used unethical means, false information, or even some kind of extortion, which, unfortunately, some clusters and individuals are still trying to do. We have always used technically and economically sound arguments, and in particular, we have tried to prove that the adoption of our proposals is in the interests of not only our member companies, but also other entities and, in many cases, the entire state.

Of course, this ethical, and difficult, way in our administrative and political environment is not always fully successful. We are aware of this, but our way of acting and behaving is a lasting value and a principle for us.

COOPERATION

- legislative bodies and state bodies of the Czech Republic
