

CECOD

In the world of fuel dispensing and industrial measuring equipment, CECOD provides its members with the latest information on key regulations impacting our industry. It also provides a technical forum to influence upcoming regulatory changes in Europe.

Members are typically companies involved in petrol filling station equipment including fuel dispensers, dispenser components, point of sales, fuel management systems, payment, and price signs. We also have members who manufacture industrial meters and systems for use with fuels, for example road tanker mounted equipment.

CECOD are active in the fields of safety, legal metrology and environmental regulations. We are world experts for explosion safety on petrol filling station forecourts, measurement of fuels, and vapour recovery, with technical committee members having key roles in the bodies which write the European standards and guides.

We have members from many European countries enabling us to gain information and influence at both European and national levels. We have an active technical committee with a number of subgroups such that members can select which disciplines they want to be involved with.
