

SGB GmbH - Leak detection systems

SGB leak detection systems for double-walled tanks, pipes and containments – for a clean and protected environment!

All systems meet the requirements of the European standard, class 1, for leak detection systems and avoid any pollution or liquid losses. Working either with overpressure or underpressure SGB leak detectors continuously and safely monitor tanks and pipes for any leak.

SGB is a DIN ISO 9001 certified company. Over 55 years of technical knowledge and over 400,000 leak detection systems currently in use, e. g. at tank farms, refineries, chemical plants, filling stations or at heating oil storage tanks, attest expertise and the highest level of quality. This is guaranteed by unification of all production processes under one roof: from invention over production to installation and maintenance.

National and international customers trust in SGB leak detection technology.
